
PROFESSIONAL EXPERIENCE

Lead Machine Learning Engineer/Scientist, Abingdon Health**Jan 22-Present****Machine Learning Engineer/Scientist, Abingdon Health****Feb 21-Dec 22**

- Designed/implemented a multi-stage deep learning system for detecting/reading rapid diagnostic tests.
- Achieved 0.99 test AUROC on a blood antibody test used to prove-out the algorithm ([announcement](#)).
- Gained responsibility for the complete ML production cycle in a unicorn-style lead engineering role.
- Annotated object detection datasets for training custom models with the TF Object Detection API.
- Curated image classification datasets using open-source tools and a bespoke preprocessing workflow.
- Developed a Python codebase for productionizing CNN image classifiers, using TensorFlow for model building/training, Weights & Biases for experiment management, and Flask for prediction serving.
- Deployed the end-to-end system via a dockerized Python web API for inference/stakeholder demos.
- Compressed prediction models with TF Lite for use on-device and deployment to a smartphone app.
- Evaluated algorithm performance on real-world clinical study data to assess model generalizability.
- Set up/maintained Linux Nvidia GPU workstations for DL workloads/production training pipelines.
- Collaborated with the CEO to ship the deep learning project and patented AppDx[®] algorithm/SDK.

Equity Research Analyst, Product Management, Exane BNP Paribas**Feb 17-Aug 19**

- Managed the Exane BNPP research pipeline, collaborating with 100 analysts and a global salesforce.
- Curated and chaired the European Morning Meeting; co-chaired the Investment Review Committee.
- Collaborated with equity strategists and sector teams in the production of department-wide reports.
- Monetised Exane's flagship investor conference in Paris (attended by 100 corporates/700 investors).
- Published independent analysis on European earnings season trends in strategy-themed reports.
- Updated financial models for the Real Estate equity research team during annual reporting season.

Product Management Associate, Exane BNP Paribas**Sep 16-Jan 17**

- Supported the Product Management team and Quality Control analysts in daily research activities.

Equity Analytics Analyst, Libra Investment Services**Sep 13-Sep 16**

- Established a distinguished track record of Apollo[®] trading views as part of a best ideas portfolio.
- Won Man Group's top broker award for Europe trade idea performance in 2015 (£400k cash prize).
- Delivered portfolio advisory services and provided education on the Apollo[®] valuation methodology.
- Won research commissions from senior Portfolio Managers and expanded the Apollo[®] user base.

Apollo[®] Intern, Libra Investment Services**Jun 13-Aug 16**

- Completed a rotational internship in Apollo[®] analytics and sales, receiving a full-time analyst offer.

EDUCATION

MSc Artificial Intelligence, Imperial College London (Merit)**Oct 19-Oct 20**

- Core studies: symbolic AI; foundational ML; Python programming; software engineering; AI ethics.
- Electives: mathematics for ML: deep learning; ML for imaging; computational optimization; NLP.
- Project highlight: collaboratively developed an RL product for medical imaging applications using industry-level software engineering techniques (Agile, git for VC, testing, CI); awarded 81%.
- Coursework highlight: implemented/evaluated modern deep learning architectures (CNN, RNN, GRU, LSTM, VAE, GAN) on problems in vision and language using PyTorch (88% average grade).

BSc Physics, University of York (First Class Honours)**Oct 10-Jul 13**

- Course content: fundamental and theoretical physics; mathematics; experimental labs; computing.
- Top scoring electives: Intro. to Quantum Computing (88%); Special & General Relativity (85%).
- Research achievement: final-year dissertation awarded 80% and nominated for best BSc/Msc project.

RESEARCH PROJECTS

Neural Network Verification, MSc AI Individual Project	2020
<ul style="list-style-type: none">Developed a MILP optimization algorithm for verifying high-dimensional neural networks using input splitting techniques to reduce the search space (paper); achieved a x3 certification speedup on MNIST.Designed/built a distributed system for sharing verification subproblems over a network of CPUs.Lab: Verification of Autonomous Systems (supervisor: Alessio Lomuscio).Tools: Python, Gurobi optimizer, Python multiprocessing.	
RL for Medical Imaging, MSc AI Group Project & Software Engineering Practice	2020
<ul style="list-style-type: none">Designed/built a GUI for performing 3D landmark detection with reinforcement learning agents (demo).Implemented a variation of the Deep-Q-Network algorithm using GUI-collected demonstration data.Lab: Biomedical Image Analysis (BioMedIA).Tools: Python, PyQt, TensorFlow 1.	
Plasma Diagnostics, BSc Physics Individual Project	2013
<ul style="list-style-type: none">Used plasma spectroscopy to model core electron conditions during laser-driven fusion experiments.	

PROFESSIONAL & ACADEMIC PRIZES

Top Europe Contributor, Man AHL Ideas Platform (£400k prize)	2016
Winner, Instructus Markets Student Finance Competition	2013
Shortlist, Goodwin Project Prize, York Physics Dept.	2013

PROFESSIONAL QUALIFICATIONS

CFA Program, Level II	2018
CFA Program, Level I	2015
CISI Capital Markets Programme	2014

VOLUNTEERING

A-Level Mathematics Tutor, The Access Project	2021
Financial Education Analyst, Cedro Alto Coffee Collective	2019

COMPUTING SKILLS

-
- Programming: Python, Bash, LaTeX, MATLAB, HTML, Prolog
 - Frameworks/tools: TensorFlow, TensorFlow Lite, PyTorch, Scikit-learn, W&B, Docker, Git, Azure
